Product Description

The KXTC8-2850 is a Tri-axis, silicon micromachined accelerometer with a full-scale output range of $\pm 2.86g$ (28 m/s/s). The sense element is fabricated using Kionix's proprietary plasma micromachining process technology. Acceleration sensing is based on the principle of a differential capacitance arising from acceleration-induced motion of the sense element, which further utilizes common mode cancellation to decrease errors from process variation, temperature, and environmental stress. The sense element is hermetically sealed at the wafer level by bonding a second silicon lid wafer to the device using a glass frit. A separate ASIC device packaged with the sense element provides signal conditioning and self-test. The accelerometer is delivered in a 4 x 4 x 1.3mm Land Grid Array (LGA) plastic package operating from a 1.8 – 3.6V DC supply. The KXTC8 features a factory programmable low pass filter, eliminating the need for external filter capacitors on the acceleration outputs.

There are 2 factory programmable modes of operation for the KXTC8:

Mode 00 – The Power Down pin must be **high** for normal operation and **low** for power shutdown.

Mode 01 – The Power Down pin must be **low** for normal operation and **high** for power shutdown.

The KXTC8-2850 is factory programmed to be in MODE 01.

1. Power up time is determined by 5 times the RC time constant of the factory programmed or user defined low pass filter.
2. Factory programmable to have a switched capacitor low pass filter at 2kHz, 1kHz, 500Hz, 100Hz, 50Hz, or no low pass filter. Optionally, the user can define with external capacitors. Maximum defined by the frequency response of the sensors.

Caution: ESD Sensitive and Mechanical Shock Sensitive Component, improper handling can cause permanent damage to the device.

This product conforms to Directive 2002/95/EC of the European Parliament and of the Council of the European Union (RoHS). Specifically, this product does not contain lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB), or polybrominated diphenyl ethers (PBDE) above the maximum concentration values (MCV) by weight in any of its homogenous materials. Homogenous materials are "of uniform composition throughout."

This product is halogen-free per IEC 61249-2-21. Specifically, the materials used in this product contain a maximum total halogen content of 1500 ppm with less than 900-ppm bromine and less than 900-ppm chlorine.

Table 4. KXTC8 Pin Descriptions

Pin	Name	Description
1	NC	Not Connected Internally
2	ST	Self Test (0=normal operating mode, 1 = self test mode)
3	NC	Not Connected Internally
4	NC	Not Connected Internally
5	PD	Power Down (0 = Enabled, 1 = Disabled)
6	NC	Not Connected Internally
7	GND	Ground
8	Z Output	Analog output of the z-channel. Optionally, a capacitor (C ₄) placed between this pin and ground will form a low pass filter.
9	NC	Not Connected Internally
10	Y Output	Analog output of the y-channel. Optionally, a capacitor (C ₃) placed between this pin and ground will form a low pass filter.
11	NC	Not Connected Internally
12	X Output	Analog output of the x-channel. Optionally, a capacitor (C ₂) placed between this pin and ground will form a low pass filter.
13	NC	Not Connected Internally
14	Vdd	The power supply input. Decouple this pin to ground with a 0.1uF ceramic capacitor (C ₁).
15	NC	Connect to Vdd or GND
16	NC	Not Connected Internally

Application Design Equations

The bandwidth is determined by a factory programmable switched capacitor filter. The filter can be set at the factory to be 2kHz, 1kHz, 500Hz, 100Hz, 50Hz, or no low pass filter. Alternatively, bandwidth can be reduced by addition of a capacitor on the output pins 8, 10, and 12 according to the equation:

$$C_2 = C_3 = C_4 = \frac{4.97 \times 10^{-6}}{f_{BW}}$$

Note:

When the PD pin is connected to Vdd or left floating, the KXTC8 is shutdown and drawing very little power. When the PD pin is tied to GND, the unit is fully functional.
